KPI Framework

Citi Bike (NYC) vs Divvy (Chicago) as Subscription Businesses

Period: July 2023 – June 2026

Overview. 16 KPIs are measured across five categories (acquisition, engagement, retention, monetization, satisfaction). The **annual membership is the subscription** ("members"); single rides and day passes are pay-as-you-go ("casual"). Most KPIs are for NYC, because only Citi Bike publishes membership, revenue and support figures. Engagement and prices are compared for NYC vs. Chicago.

1 Acquisition — getting new subscribers

KPI	Definition	Result
Sign-ups or renewals (NYC)	annual memberships bought or renewed per month	strongly seasonal: about 3,400–4,500 in Jan/Feb vs. 18,300–20,600 in summer
Passes sold (NYC)	single-trip and day passes sold per month (potential members)	day passes: about 2,000–4,000 in Jan/Feb (2,000–7,000 across Dec–Feb) vs. 16,000–37,000 in summer. Single-trip passes: *use with caution*: about 1 million a month in summer 2024; in 2025 about 200,000–265,000 in Jan–Feb and May–Sep but 37,000–173,000 in Mar, Apr and Oct–Dec; and Jan and Feb 2025 show the identical figure (199,930), which suggests a counting change or a reporting error.
Plan used (survey)	how Citi Bike users last accessed it: the acquisition channel	**44% hold a subscription**: full-price annual 17.6%, Lyft Pink 13.7%, Reduced Fare 6.1%, employer/school 5.4%, Lyft Pink monthly 1.5%. Single ride 46%, day pass 6%.

2 Engagement — how much subscribers use it

KPI	Definition	Result
Member share of trips (NYC vs. Chicago)	member trips ÷ all trips	**NYC 81–83%**, **Chicago 64–65%**
Trips per member (NYC)	member trips ÷ annual members, per month	about 12.5–15 in January vs. about 32 in Sep/Oct
Average trip length (both)	minutes per trip	members about 11–12 min; casual riders about 17–18 min
Use frequency (survey)	how often cyclists use Citi Bike	14.4% at least monthly; 49.5% have never used it

3 Retention — keeping subscribers

KPI	Definition	Result
Net membership growth (NYC)	change in total annual members, month on month and year on year	from -1.6% (Jul 2024) to $+5.6$% (Sep 2025); **127,485** $\rightarrow$ **138,055** members (Jun 2024 $\rightarrow$ Jun 2026)
Lapsed users (survey)	used Citi Bike before, but not in the last 12 months	19.4% of cyclists
Winter vs. summer riding (both)	winter daily trips ÷ summer daily trips	members keep **2–3**$\times$ **more** of their summer riding than casual riders

No churn rate: the reports give one figure for "signed up or renewed", so churn cannot be calculated honestly. Net membership growth is used instead.

4 Monetization — revenue

KPI	Definition	Result
Revenue mix (NYC)	each revenue category ÷ revenue before tax (sales tax is passed on to the government)	**e-bike fees are the largest line** ($101.7M), then casual rides $57.8M, memberships $32.4M, Lyft Pink $18.2M (Jul 2025 – Jun 2026; Feb and May 2026 calculated from year-to-date totals)
List-price MRR / ARR (NYC)	annual members $\times$ annual price ÷ 12 (ARR $= \times 12$)	about $2.2M $\rightarrow$ $2.7M per month; an upper bound, as some members pay discounted rates
Price and break-even (NYC vs. Chicago)	annual price; annual price ÷ day-pass price	NYC $205 $\rightarrow$ $219.99 $\rightarrow$ $239 (= 9.6–11.6 day passes); Chicago $143.90 (= 7.2–8.0 day passes)

5 Satisfaction — customer experience

KPI	Definition	Result
Support calls per 100 trips (NYC)	phone calls ÷ trips × 100	improved from 0.57 (2023) to 0.23 (2026)
Call handling time (NYC)	average minutes per support call	**worsened from 6.0 to 15.3 minutes** (annual averages, 2023 → 2026 Jan–Jun; monthly peak 18.6 in Jan 2026, 10.9 by Jun 2026): a warning sign
Reasons for not using (survey)	share of non-users citing each reason	prefer own bike 52%, **too expensive 35%**, not available nearby 28%, uncomfortable biking in NYC 15%

No NPS or CSAT: none is published, so support figures and survey answers are used as stand-ins.

6 What the KPIs show

- **Subscribers are the stable base:** they make most trips and keep riding in winter and bad weather.
- **Growth depends on the season:** most sign-ups happen in spring and summer, when casual riding also peaks.
- **Grow from new riders rather than converting casual riders:** casual fees bring about $7.32 per casual trip against $1.35 of membership fees (Memberships + Lyft Pink) per member trip (Jul 2025 – Jun 2026; e-bike fees are not split by rider type and are left out of both), so a conversion lowers revenue per trip. Report revenue includes Jersey City and Hoboken from Mar 2025 while trips are NYC only, so both figures are overstated by up to about 2.5%; the roughly fivefold gap is unchanged. Price (35%) and no station nearby (28%) are the reasons non-users give that the operator can act on. Query: `sql/analysis/recommendation_checks.sql`.
- **Channels beyond direct sales matter:** Lyft Pink, employer/school plans and Reduced Fare together make up over a quarter of users.
- **Pricing structure matters, not only price:** NYC has a higher member share despite a pricier membership; one possible explanation is its flat single-ride price, which may make subscribing more attractive (association only).
- **Watch customer service:** fewer calls, but much longer handling times.

7 Sources and notes

- **Sources:**
  - Citi Bike monthly operating reports (NYC);
  - Citi Bike and Divvy trip data, and the U.S. Bureau of Transportation Statistics (trips);
  - Citi Bike and Divvy pricing pages (prices);
  - NYC DOT Citywide Mobility Survey 2024 (survey KPIs, cyclists only, weighted).
- **Formulas:** `sql/kpis/01--10_*.sql`. **Results:** `data/marts/nyc_monthly_kpis.csv` and the other files in `data/marts/`. **Dashboard:** the “New York” tab of the Tableau story.
- **Notes:**
  - The February and May 2026 reports were not published. Members, sign-ups and support figures are left blank; revenue is calculated from the year-to-date totals in the neighbouring reports.
  - From March 2025, the reports’ trip totals include Jersey City and Hoboken.
  - Emails/web forms look unreliable from Jul 2023 to Apr 2024 (1–6 a month in 2023, 0 in Jan 2024, then about 119,000 in each of Feb–Apr 2024); support-contact trends should start in May 2024.

- Revenue is preliminary and unaudited.
- Prices are snapshot observations.
- Single-trip pass counts in the reports look inconsistent from 2025 (see Acquisition).
